AEKNIL

"AEKNIL INJ. is well absorbed, following an intramuscular Injection. Peak Plasma concentration, well above the peak plasma concentration attained after oral administration, is attained 15 minutes after Intramuscular Injection. Thereafter, Plasma concentration rapidly declines. Approximately 20% of peak plasma concentration is present in the blood at 1 hour and 3% at 6 hours after injection"

"Pharmacokinetic Study of AEKNIL INJ." by Dr. E. Icasas-Cabral, M.D. & Prof. Esperanza J. De Ocampo, at Philippine Heart Center, Philippines.

"AEKNIL INJ. can be safely given to all age groups, including new born babies. In all type of illnesses, specific or non-specific, it is very useful in lowering temperature to normal within a short time, which brings about considerable relief and comfort to patients. It is not toxic & can be safely used. No local pain was complained by older children"

"Study of AEKNIL INJ. in Pediatrics" by Dr. Versha M. Modi & Dr. (Mrs.) A. B. Desai, M.D. Dept. of Pediatrics, Medical & Civil Hospital, Ahmedabad. Published in Pediatric Clinics of India-July 1974

"We conclude that AEKNIL INJ. is of considerable value when used as an Antipyretic in a wide range of common pediatric ailments. The great advantage is that it is almost free from any side effects and because of its complete miscibility in water, it could be used both in Oral & Intramuscular form"

"Summary of Clinical Trials on AEKNIL INJ." by Dr. S. N. Lohe, M.D., D.C.H. & Dr. P. R. Deshpande, M.D., D.C.H. Published in the Bombay Hospital Journal Vol. 9, No. 3, July. '67.

"AEKNIL is of considerable value when used as an Antipyretic-Analgesic drug. The advantage with this is it is free from practically all of the side effects other Analgesics have."

"Therapy of fever with reference to Paracetamol" by Dr. M. Sahal, Dept. of Pediatrics, Derbhanga Medical College, Bihar.
